

# EBO2

*explained*

*An absolute breakthrough in  
Functional and Regenerative Medicine.*

EBO2 is the most comprehensive protocol for the administration of ozone in a clinical setting.

In this protocol, ozone is infused into your blood (outside your body) and then gets infused back in intravenously.

## The Benefits of EBO2

- Reduces **pathogens** such as viruses, bacteria, fungus and more
- Strengthens and modulates the **immune system**
- Reduces **oxidative stress**
- Down regulates **inflammation**
- Removes **inflammatory** proteins
- Removes **heavy metals, mold,** and other **toxins**
- Balances **blood pressure** and **cholesterol**
- Increases **physical performance**
- Increases **stem cell proliferation** and **mobilization**
- **Stimulates** NAD+ production

# the EB02 process

The EB02 method delivers ozone to all of your blood (5-8 liters). The entire process is comprised of 3 main steps and takes 90 minutes in the office.

## Filtration

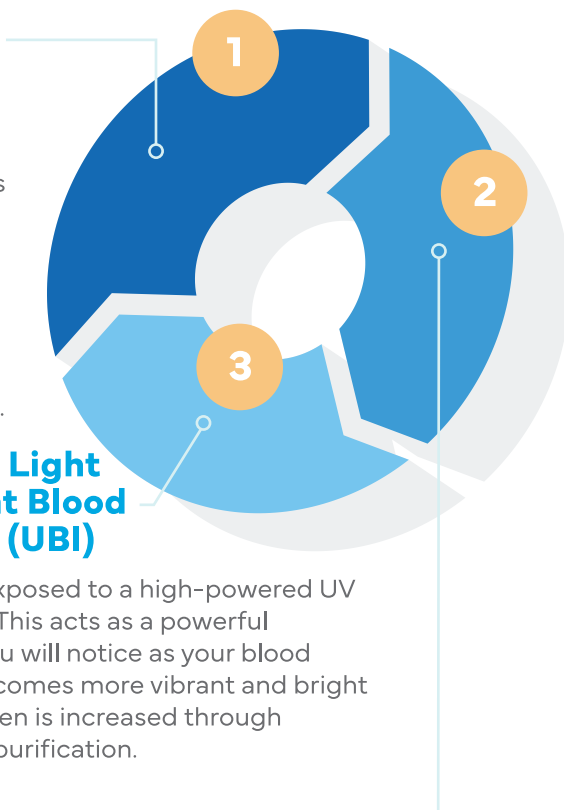

As the blood passes through the filter it removes excess inflammatory proteins, fats, cholesterol, heavy metal toxins, cellular waste, senescent cells.

## Ultraviolet Light & Red Light Blood Irradiation (UBI)

Blood is then exposed to a high-powered UV and Red Light. This acts as a powerful disinfectant. You will notice as your blood re-enters, it becomes more vibrant and bright red as the oxygen is increased through ozonation and purification.

## Ozonation

Volumes of scientific literature spanning over decades demonstrate that ozone is a very potent oxidant, which has the ability to neutralize virtually any pathogen (virus, bacteria, fungi) that it comes in contact with as well as activates the innate immune system.
